

Product Announcement EtherCAT Now Available

Effective today, Yaskawa America, Inc. is pleased to release the EtherCAT communications option board for the V1000, A1000 and P1000. The board is available for sale and shipment.

Product Overview

The EtherCAT communication option board, SI-ES3 for A1000/P1000 and SI-ES3/V for V1000, is a dual-port board that allows the drive to connect into an EtherCAT network. Through the EtherCAT network, there will be the ability to monitor the drive, control the drive and/or change parameters in the drive.

The option board can be mounted in either the A1000/P1000/V1000 stand alone drive or A1000/P1000 configured panels.

You will need the following drive software versions to ensure compatibility of the drive and option board. Drive software version can be viewed with monitor U1-25.

A1000 – 1017 and above

P1000 – 8500 and above

V1000 – 1020 and above
